RE: Recommendation letter for Rolf Schröder

To whom it may concern,

I am very glad to write a recommendation letter for Rolf Schröder, who has worked at Anevia during spring and summer 2011.

The objective of his internship was to design and implement a software plug-in for the Firefox web browser. The goal was to make it possible for the Anevia testing team to easily record Web GUI test scenarios and generate automated test scripts.

The base for this work was the Selenium IDE Web testing suite, and the target was the generation of test scripts in Python language for the Testerman automated test framework.

During this work, Rolf has worked with technologies that were not familiar to him at first (Javascript and Python languages, the TTCN-3 norm, etc). He nevertheless was able to quickly grasp and master these, proving to have great adaptability and a keen sense of analysis.

I would definitely recommend Rolf for any software engineering job. Besides the technical prowess, he displayed a remarkable ability to set goals and reach them without missing the schedule. Additionally, he showed very good team-working skills with great communication, in person, email and exhaustive software documentation.

Finally on a personal level, I was very pleased to work with Rolf, who has an even-tempered, calm and optimistic personality - among other great human qualities. I look forward to his future successes.

Best regards,

François Gombault
